Life sciences economic development:

What is the role of state government in supporting life sciences economic development?

An Embryo is not a human -- Georgia has to get past the killing of an embryo is the killing of a person. Even with that constraint, we need to be devoting resources in this new area, especially in light that an acceptable method may be found to by-pass the embryo killing process.

K-16 science education:

How can Georgia ensure that its students will be able to compete for 21st century advanced technology jobs and that our state will have the skilled work force to support life sciences industry growth?

Culture of Growth -- The issue here is not the students, but the culture of growth. Cobb County has the culture of excellent high schools but it also does not want to extend a form of MARTA commuter rail through their county for fear of it destroying its culture.

Federal health care reform:

What, if anything, is the most critical need for Georgians when it comes to health care reform?

Second Class Health Care -- Health care can be equal for everyone, can be first class with no secondary class, or can be first class with second class. The problem is that everyone wants first class health care. Some of us need realize that we are going to get second class health care, if we are going to get any health care at all. Living in denial is not going to help. Obama has at least come up with a solution.
